Note: In spite of the membrane a full watertightness of your clothing cannot be guaranteed. You are therefore recommended to protect any electronic devices (e.g. mobile phone, MP3 player, intercom system, pocket PC/PDA, etc.) in the pockets from getting wet.

	Iron, Medium Heat
	Iron, Hot
	Do Not Iron
	Dry Clean – with the corresponding solvents.
	Dry Clean
	Do Not Dry Clean
	Do Not Bleach

► Important care labels

	Machine Wash 30°C
	Machine Wash 40°C
	Machine Wash 60°C
	Machine Wash – Delecatés -30°C
	Machine Wash – Delecatés -40°C
	Hand Wash
	Do Not Wash
	Tumble Dry
	Do Not Tumble Dry
	Iron, Low Heat

► Tips for cleaning and impregnating functional textiles and leather

In order to preserve the special functions of your motorbike clothing and ensure a preferably long useful life, functional textiles and leather should be cleaned and cared for.

► Function and structure of climate membranes

Steam molecules generated from sweat must be transported to the outer side by the material. On the other hand, water drops must not enter the clothing but rather be prevented from doing so. This is a special feature of climate membranes that offer special benefits for bikers.

► The following section provides some tips for cleaning and impregnating functional textiles:

- Always observe the manufacturers care instructions when cleaning and impregnating clothes.
- Remove the protectors before cleaning in order to avoid damages.
- Membrane clothing should be cleaned more frequently as intensive dirt reduces the breathability.
- Conventional detergents and in particular fabric softeners can impair the membrane's breathability and reduce the effectivity of impregnants. The capillary effect can even drag water into the inner clothing layers.
- Be sure to reimpregnate the clothing regularly.
- Never spin the clothing at high speeds in the washing machine (up to 900rpm).
- Cleaned functional textiles should be dried carefully, i.e. not on a radiator and not in direct sunlight.
- The textiles must be impregnated in order to be protected from getting soaked, dirty and bleaching out.
- The impregnating effect can be increased by subsequent thermal treatment – e.g. by hanging up the textiles in sunlight after having dried completely.

► The following section provides some tips for cleaning and impregnating leather clothing:

- Always observe the manufacturers care instructions when cleaning and impregnating clothes.

- After having removed the protectors, leather clothing can be cleaned manually using a special detergent or even be machine-washed.
- Leather must be dried thoroughly after washing and should be hung in a warm and well-ventilated place for this purpose. Never place leather clothing on radiators or in strong direct sunlight in order to avoid it drying out.
- Leather must be provided with fat and nutrients after cleaning in order to keep it soft and protect it from becoming penetrated with dirt or water. Use leather fat carefully.

The tips mentioned above are also applicable for cleaning and impregnating [leather/textile combinations](#).

Our application technology team will be pleased to answer your questions. You can contact our team by phone under +49 (0)841/635-55.

► Products for cleaning and impregnating functional textiles

Functional detergents:

- Special detergent for all functional textiles (hand and machine wash) and leather
- Excellent cleaning performance
- Special effective agent combination restores the breathability of climate membranes
- Optimal impregnation preparation for clothing fibres

Order no. 10004346

Impregnation spray:

- For all textiles and leather exposed to weather impacts, like e.g. functional clothing, leather combinations, boots, gloves, tents, etc.
- Excellent wet and UV protection
- Extremely long-lasting effect
- Highly efficient
- Fast and easy application

Order no. 10004344

Leather care:

- For all smooth leather clothing, like biker combinations, boots, leather luggage, etc.
- Durable full water impregnation
- Keeps the leather smooth and resistant
- Provides the leather with a deep gloss
- Optimal for TFL cool leather
- Preserves the membranes' breathability

Order no. 10004035
